## PROFESSIONAL SUMMARY

Results-driven Flutter Android developer with hands-on experience building and shipping full-featured Android applications from design to signed APK. Specialises in clean architecture, BLoC state management, Supabase/Firebase backends, and real-money payment integrations (Paystack, Remita). Proven ability to deliver complete, testable apps independently, not just UI work. HND Computer Science Student with a track record of building production-grade apps under real constraints.

## TECHNICAL SKILLS

|                   |                                                                         |
|-------------------|-------------------------------------------------------------------------|
| <b>Mobile:</b>    | Flutter, Dart: clean architecture, BLoC, GoRouter, get_it DI            |
| <b>Backend:</b>   | Supabase (RLS, Edge Functions, real-time), Firebase, REST APIs          |
| <b>Databases:</b> | PostgreSQL, Floor (SQLite)                                              |
| <b>Payments:</b>  | Paystack, Remita: wallet transfers, atomic transactions                 |
| <b>Tools:</b>     | Android Studio, Git, GitHub, Figma (basic)                              |
| <b>Design:</b>    | Graphic design, app mockups, end-to-end delivery (design to signed APK) |
| <b>Learning:</b>  | FastAPI, PostgreSQL advanced patterns, full-stack API design            |

## EXPERIENCE

- Final Year Project Lead** | Auchi Polytechnic 2025 – 2026
- Architected and built CampusPay: a campus-wide payment platform with multi-wallet atomic transfers
  - Resolved complex Supabase RLS timing issues using SECURITY DEFINER triggers and phased registration flows
  - Integrated Remita payment gateway with real transaction handling and error rollback
  - Applied clean architecture with feature-based DI (get\_it), producing testable and maintainable code
- Freelance Graphic Designer** | Self-employed 2023 – Present
- Produced product mockups, promotional materials, and photo retouching for clients
  - Designed Fiverr gig thumbnails and app UI mockups alongside mobile development projects

## KEY PROJECTS

- CampusPay:** *Flutter · Supabase · Remita · BLoC · Clean Architecture*
- Campus payment platform: student wallets, atomic fund transfers, Remita-powered fee payments
  - Resolved RLS timing edge case via SECURITY DEFINER trigger; custom transactional emails via Brevo
  - Full phased registration flow — email confirmation → matric number → PIN setup
- SabiStyle:** *Flutter · Supabase · BLoC · GoRouter · Paystack*
- Nigerian fashion e-commerce app: product catalogue, cart, Paystack checkout, order management
  - Delivered significantly ahead of deadline; shipped signed APK with demo video
- Expense Tracker:** *Flutter · Supabase · Offline/Online Sync*
- Cloud-synced expense tracking with offline-first architecture; seamless data merge on reconnect
- Pomodoro Focus Timer:** *Flutter · BLoC · Floor · fl\_chart · Local Notifications*
- Full-featured focus timer with local DB persistence, productivity analytics, and push notifications

## EDUCATION

---

**Higher National Diploma - Computer Science** | Auchi Polytechnic

2024 – 2026

- Relevant coursework: Data Structures & Algorithms, Backend Development II, Advanced Frontend, Embedded Systems
- Final year project: CampusPay - Expected submission June 2026

## ADDITIONAL

---

- Active on X (@mikebuilds\_) — sharing build progress, mobile dev insights, and project launches
- Currently expanding into FastAPI and PostgreSQL for full-stack delivery capability
- Strong self-directed learner; 5+ hours of focused development practice daily
